PinePie

Animation Path Visualizer:

Try out a demo scene to get how it works.

- Add this component to any animated gameobject (which have the animator component with it) by
  Add Component > PinePie > AnimPath

- It should automatically access the **animation clip**, otherwise you can set it by "Get" button, or drag your animation clip.
- **Start recording and try creating animation**, the path should be followed as you create.

Lock view toggle keeps path visible even if gameobject is not selected.

Editing Path by moving GameObject: **Path is exactly updated** when recording is enabled, and transform is moved. Otherwise you can force it to do so by clicking the **Update Path button.**

Editing Path by in Animation Path: You have to set "keep path updating" enabled to force path to update each editor frame.

Feedback

Request a Feature for your game development and **Get free voucher when it is ready**, write your needs and mail it to **sv92295351@gmail.com** or give us feedback on Pine Pie website.

If you have any **problem or suggestion** regarding this Asset you can kindly mail it to **sv92295351@gmail.com**
